

The onchain vault structuring platform

Compose, test, incubate and scale structured products, in one verifiable venue.

At ETHOnline we built the first strategy on Prime Build, composed from its first modules, with a floor and a router between its lanes.

The chain holds a vault. **It cannot run one.**

Problem.

01

A vault has an infrastructure problem: a smart contract cannot react to markets, and it cannot compute the math a strategy needs, so the work that actually operates a vault sits on private servers, and that breaks composability, growth and trust.

Solution.

02

Priime is where a strategy becomes a verifiable, automated onchain vault. A strategy is composed on a canvas, backtested and launched as a vault, and the off-chain work it needs runs as decentralized compute on the Trustless Execution Network.

Cost.

Conflict of interest, legal weight, broken composability. \$7.5B is curator-run today.

03

The Trustless Execution Network **extends what contracts can do**

Trigger fires

A decentralised operator
network re-runs the same compute

The network quorum reaches
one deterministic decision

Handler settles on Base

Composability

A vault publishes its rules onchain,
so any protocol can build on it.

Efficiency

The strategy runs offchain,
computing what a contract
never could.

Security

Not one cron job on one server,
but a network of operators that
must agree.

Reactivity

Every dependency gets a watcher,
against liquidation cascades and
contagion. Moving from punitive to
proactive DeFi.

The verified result settles onchain, **every block**.

Vaults that are verifiable, reactive, composable and more secure; going **from punitive to reactive DeFi**

DEPOSITOR

01

Every rule published,
every action attested.
Depositors stop
gambling on a logo
and start knowing
what they invest in.

BUILDER

02

A builder ships
without running a
desk, builds more
reactive, automated,
secure vaults, and
carries the
transparency the
CLARITY Act asks for.

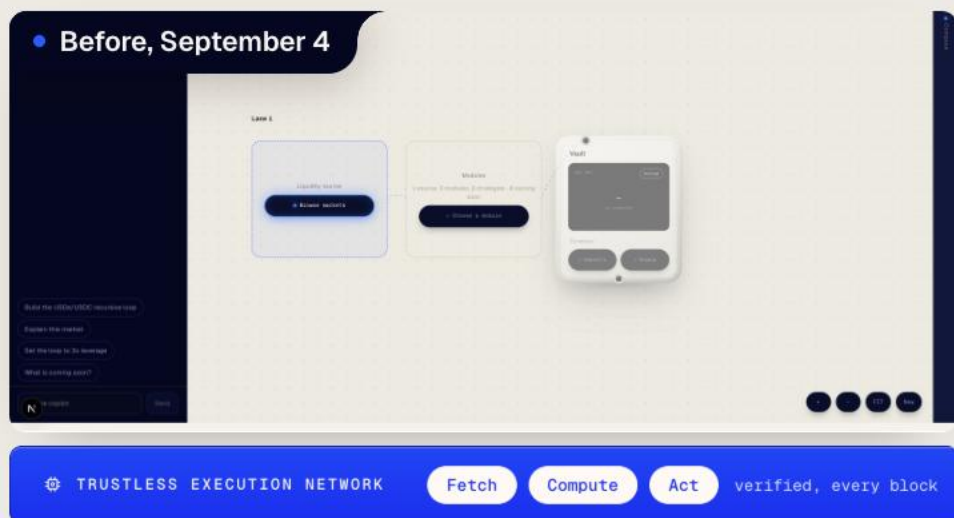

OTHER PROTOCOLS

03

Composable. Other
protocols and
tokenised assets gain
utility and value inside
the Priime protocol
and its vaults.

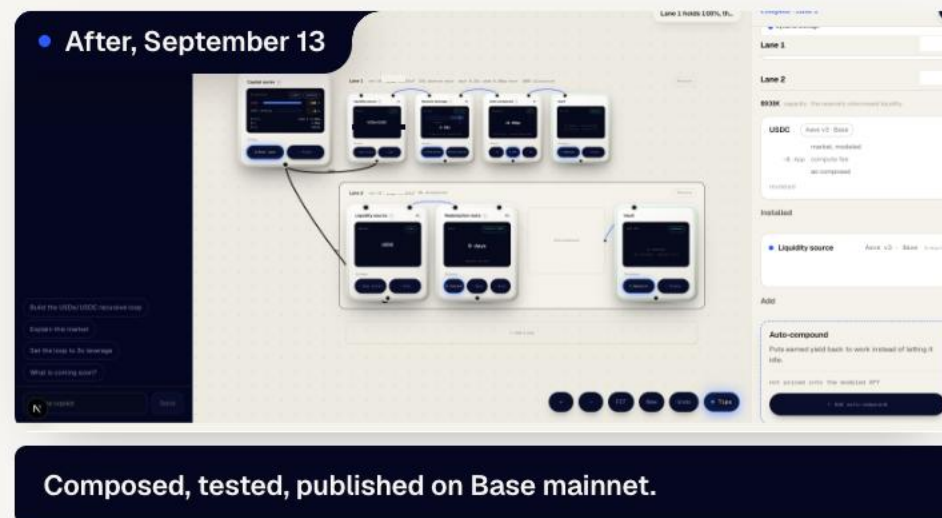

Arrived with a network and canvas, **left with modules**

On September 4: the Trustless Execution Network and the canvas. Not one module yet.

The Trustless Execution Network extends what a smart contract can do, so far more advanced vaults become possible.

The canvas framework and the Copilot were built, with the logic behind them. No modules.

Composed, tested, published on Base mainnet.

Liquidity source. USDe/USDC on Morpho Blue, Base.

Dynamic leverage. Holds the loop at 2.50x inside a published band.

Auto-compound. Sweeps earned yield back in, every 24 hours.

Router. Moves the whole book to the lane that pays.

Watch the demo video, or [test it yourself on mainnet](#)

Priime workflow demo

youtu.be/WzVeModLHQE

Creating, testing and publishing a vault, end to end.

Liquidity source picks the market, Dynamic leverage holds the loop, and Auto-compound puts the yield back to work. When the loop pays less than plain USDC lending, the Router moves the whole book across, and back again when the loop leads.

[Try the live demo on mainnet ↗](#)

priime-demo.duckdns.org/build

Four modules built, every rule published

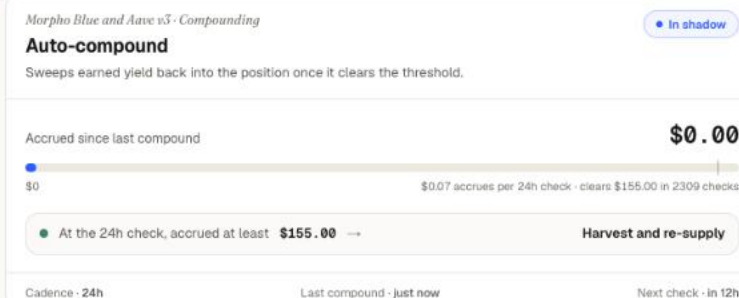

Liquidity source. Picks the venue and the market: USDe/USDC on Morpho Blue, Base.

Capital router. Switches lanes after USDC lending pays 1.51pp more for 48 hours.

Dynamic leverage. Holds 2.50x. Health band: deleverage 1.46, lever up above 1.60.

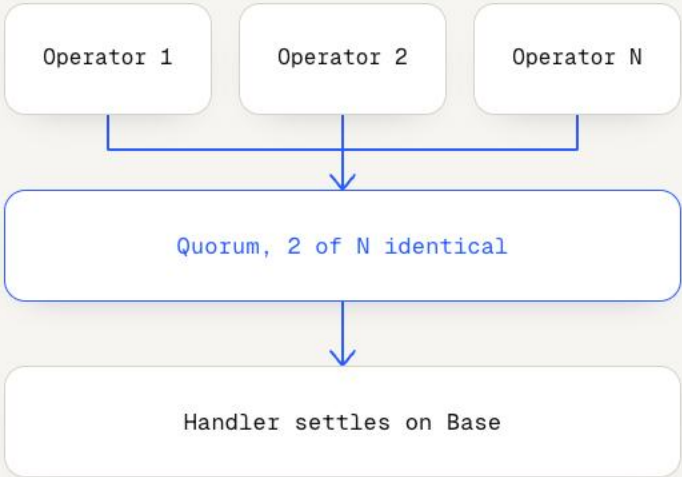

Auto-compound. Sweeps earned yield back in once \$155.00 has accrued, every 24h.

In the coming months, every module needed to replicate any vault hosted on the Morpho protocol lands here.

Offchain compute, **made verifiable onchain**

The Trustless Execution Network can extend smart contract capabilities on any chain, including EVM, SVM or even Move.

On-chain rows with Verify

Action	Detail	Time	Verify
Vault published	by You · \$500 attested	just now	
Execution landed on chain	signed packet accepted · block 50,208,131	19d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,193,821	20d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,192,081	20d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,192,021	20d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,191,072	20d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,190,131	20d ago	Verify ↗
Execution landed on chain	signed packet accepted · block 50,188,331	20d ago	Verify ↗

Every onchain row carries a Verify key to Basescan.

Every offchain decision is verified before it settles.

The whole management process is verifiable, and other protocols can compose on it.

Act outside the published mandate and the record makes it slashable onchain.

Two **sponsored integrations**

The Graph

Every vault is indexed from its first block, so its full track record is public and queryable.

Uniswap

Loops open and unwind through a pinned Uniswap V3 pool, with real swaps already settled on Base.

Disrupting every available vault on Morpho markets, module by module

TODAY

The first strategy on Priime Build, composed from its first modules.

NEXT

Every module needed to rebuild any vault on Morpho, but verifiable and reactive on Priime.

THEN

Morpho can automate its listing review, so a Priime vault is listed or rejected automatically instead of by hand.

AFTER THAT

Vault creation challenges with tier one ecosystems: Unichain, Robinhood, Base and many more.

Four founders, **finance and infrastructure**

Priime needs four things true at once: growth, a verifiable engine, an operating and legal structure, and a strategy book. Each founder owns one.

Antoni

CEO

10 years in Web3 growth and product. Led growth at Flow: TVL \$13M to \$100M.

Jakub

CTO

Senior Rust engineer. Built DEX, lending and staking protocols, core CosmWasm contributor, verifiable operator infrastructure.

Kevin

COO

4 years at Crédit Agricole CIB on a €100M+ portfolio, then a decade in real-estate assets.

Khaled

CPO

8+ years of quant trading. Led market making at Nonco, scaled flow technologies through its acquisition.

Priime

Compose it, test it, distribute it.
